Glossary of terms used in the GPRA permitting reports

for the operating permit and post-closure baselines

Accomp. date (accomplishment date) – *as used in the detailed reports*

> This is the date that the facility's process unit is counted as meeting the goal. If a date is not listed in the "accomp. date" column for a unit, then that unit does not have approved controls in place.
>
> list of what qualifies as an accomplishment (appendix A)

Accomplishment date range – *as used in the selection criteria on the cover page*

> This is the time-frame of facility-level accomplishments captured by these reports.

Approved controls in place

> Meeting the GPRA goal for permitting requires that the facility have approved controls in place to prevent dangerous releases to air, soil, and groundwater. The "approved control" is typically a permit (operating permit or post-closure permit).
>
> list of what qualifies as an accomplishment (appendix A)

Date range

> See accomplishment date range

Effective date – *as used in the detailed report*

> This is the date when the corresponding legal and operating status code combinations became effective.

Facilities with approved controls in place – *as used in the summary report*

> This refers to the total number of accomplishments tracked in RCRAInfo, from the beginning of tracking (1980) to the date the report was pulled. The selected date range does not affect this information. A facility is counted as meeting the goal when all units in that GPRA baseline (operating permit or post-closure) meet the goal criteria.

Facilities with approved controls in place in date range – *as used in the summary report*

> These are the accomplishments that occurred within the time-frame given on the cover page. A facility is counted as meeting the goal when all units in that GPRA baseline (operating permit or post-closure) meet the goal criteria.

Facilities <u>without</u> **approved controls in place** – *as used on the summary report*

> This is the total number of facilities that have at least one unit that does not have approved controls in the selected GPRA baseline of facilities (either operating permit or post-closure). The selected date range does not affect this information.

GPRA baseline *– as used in the detailed report*

> Identifies whether the facility's process unit is in the OPU (GPRA Operating Permit Baseline Universe) or the PCU (GPRA Post-Closure Baseline Universe). A unit cannot belong to both universes. If a unit starts in the GPRA Operating Permit Baseline Universe it will continue in the same, even if it eventually gets a post-closure permit.
> See below for individual baseline descriptions.

GPRA Operating Permit Baseline Universe

> This baseline universe includes only those facilities which had at least one process unit that:
> •   Had or needed an operating permit as of 10/1/97
>   This baseline universe **excludes** units that:
> •   needed an operating permit <u>prior to</u> 10/1/97, but the permits were subsequently terminated or expired and the unit(s) clean closed prior to 10/1/97 or were in the closure workload at that time
> •   <u>did not</u> need a permit prior to or on 10/1/97

GPRA Post-Closure Baseline Universe

> This baseline includes any facility that had at least one land disposal unit that ceased operating before 10/1/97 and had <u>not</u> yet clean closed or was <u>not</u> in the operating permit workload or closure workload.

Legal status code (or process legal status code)

> This code describes the legal status of the process unit or unit group as defined by RCRA regulations and applicable policy. It is used in conjunction with the operating codes to define the unit at different points in its evolving operating and regulatory life cycle.
> <u>list of legal status codes and definitions (Appendix C)</u>

LegOp Stat (process legal and operating status codes) *– as used in the detailed reports*

> This is the abbreviation for the process legal and operating status code combinations for the facility's process units (ex. PIOP = operating permit issued and operating). Primarily, the status codes determine if a facility is under control.
> <u>list of legal and operating status codes and definitions (Appendix B)</u>

Operating permit *– as used in the universe selection on the cover page*

> See <u>GPRA Operating Permit Baseline Universe</u> for the definition.

Operating status code (or process operating status code)

> This code describes the operating status of the process unit or unit group and the presence of RCRA regulated hazardous waste in the unit. It is used in conjunction with the process legal codes to define the unit at different points in its evolving operating and regulatory life cycle.
> <u>list of operating status codes and definitions (Appendix D)</u>

OPU (GPRA Operating Permit Baseline Universe) – *as used in the detailed report*
See GPRA Operating Permit Baseline Universe for the definition.

PCU (GPRA Post-Closure Baseline Universe) – as used in the detailed report
See GPRA Post-Closure Baseline Universe for the definition.

Post-closure – *as used in the universe selection on the cover page*
See GPRA Post-Closure Baseline Universe for the definition.

Process (or process code) – *as used in the detailed report*
This is a code that specifies the process unit group's current waste treatment, storage, or disposal type (ex. D80 = landfill).
list of process codes and definitions (Appendix E)

Seq # (Sequence number) – *as used in the detailed report*
Every facility's process unit or process unit group has a unique sequence number that is used to track each unit or unit group.

Total - facilities with approved controls in place – *as used in the summary report*
This refers to the total number of accomplishments tracked in RCRAInfo, from the beginning of tracking (1980) to the date the report was pulled. The selected date range does not affect this information.

Unit name
This is the name given to the facility's individual process units or unit groups (not the type of unit).

Universe – *as used in the selection criteria on the cover page*
States what type of facilities the report covers: "Operating Permit," the GPRA Operating Permit Baseline Universe (OPU), "Post-Closure," the GPRA Post-Closure Baseline Universe (PCU) or the combined baseline. A facility may have units that are not on either of these GPRA baselines. Definition of the baselines

Updates of data
The data is current as of the date listed on the report cover page except for states that translate their data. If states/regions choose to use a program other than RCRAInfo to enter the data and "translate" their data to RCRAInfo, it can take up to about 6 weeks for the activity to be reflected in these RCRAInfo reports.   List of translator states (Appendix F)
These reports results will be updated monthly on the internet.

A GPRA accomplishment or having approved Controls in Place

A TSDF in the GPRA Operating Permit Baseline Universe is considered to have met the GPRA goal when all units identified as part of this baseline universe have approved controls in place. Likewise, a TSDF on the GPRA Post-Closure Baseline Universe is considered to have met the GPRA goal when all units identified as part of this baseline universe have approved controls in place. The following lists contain the most common situations that indicate accomplishment of the GPRA goal:

1. For a unit in the operating permit baseline, approved controls in place means:

    a.   an operating permit has been issued for the unit, or an existing permit at the facility has been modified so that the unit in question is considered as permitted.

    b.   the unit has achieved clean closure, as verified by the lead regulatory agency (the unit was on the operating track, but closed instead).

    c.   the unit closed before being issued an operating permit and approved post-closure controls, as discussed in 2 (c) and 2(d) below, are being met.

    d.   the unit never managed hazardous waste (the unit does not have closure obligations).

    e.   the unit is proposed and has not yet been built (the unit will need a permit issued before it is built and manages hazardous waste).

    f.   the unit has been accepted by the Superfund program (Federal or state equivalent) for remediation.

2. For a unit in the post-closure baseline, approved controls in place means:

    a.   a post-closure permit has been issued for the unit, or an existing permit at the facility has been modified so that the unit in question is subject to the post-closure permitting standards.

    b.   the unit has achieved clean closure, as verified by the lead regulatory agency.

    c.   the unit has properly closed with waste in place, as verified by the lead regulatory agency, and a post closure plan, or similar enforceable document (such as a consent order), covers appropriate post closure obligations including part 264 subpart F and G groundwater monitoring and cap maintenance requirements.

    d.   the unit is situated among solid waste management units, and closure and post-closure obligations at the unit are covered by a corrective action order or a similar enforceable document.

    e.   the unit has been accepted by the Superfund program (Federal or state equivalent) for remediation.

As mentioned previously, this list describes only the most common situations where the GPRA goal of safe waste management is met. Unique situations will arise that are not captured by this list. Therefore, other controls in place that prevent dangerous releases to air, soil, and groundwater will also be considered on a case-by-case basis by the region or Headquarters.

States that translate their data to RCRAInfo

Arizona
California
Hawaii
Nevada
Territories of Guam and American Samoa

Information as of September 7, 2000

Note: Information from states that translate their data can be delayed up to about six weeks before changes are reflected on the GPRA reports.
